

On Realism of Architectural Procedural Models

Jan Beneš, Tom Kelly, Filip Děchtěrenko, Jaroslav Křivánek, Pascal Müller

Quick Quiz

Quick Quiz

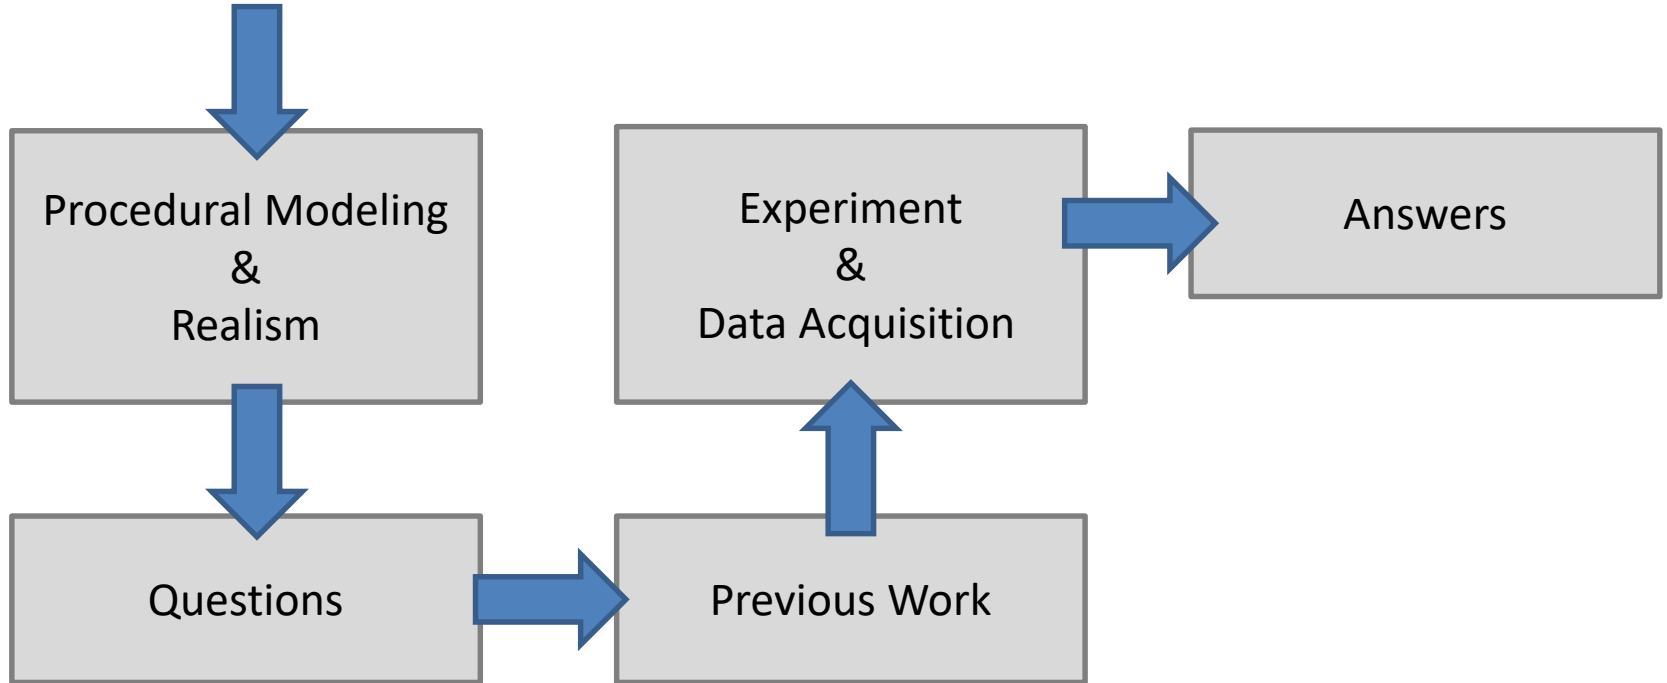

Computer Generated

Photograph

Overview

Procedural Modeling

- **Procedural modeling**
 - Tool for artists
 - Or fully automatic
 - Wide range of outputs

[Palubicki09]

Procedural Modeling

- **Procedural modeling**
 - Tool for artists
 - Or fully automatic
 - Wide range of outputs
- **Wide use**

[Palubicki09]

[Independence Day]

Realism

Realism
↔
Plausibility
↔
Immersion

[Velocipedia, Gianluca Gimini]

Realism

Realism
↔
Plausibility
↔
Immersion

- Model & material & display
- Should be studied
- For procedural modelling

[Velocipedia, Gianluca Gimini]

What we did

**Procedural
architecture**

What we did

User Study

Question #1

(1) Can people tell procedurally generated buildings from real ones?

Question #2

(2) Is realism carried in the detail or in the larger structure?

Question #2

(2) Is realism carried in the detail or in the larger structure?

Question #2

(2) Is realism carried in the detail or in the larger structure?

Question #3

(3) What factors do the users think influence the perception of realism?

Questions

- (1) Can people tell procedurally generated buildings from real ones?
- (2) Is realism carried in the detail or in the larger structure?
- (3) What factors do the users think influence the perception of realism?

Previous Work

Previous Work - Realism

*“There is no dirt,
no dust, no
fingerprints on the
glass table...simply
too beautiful, too
clean and
polished...”*
[Reinhard13]

Previous Work - Realism

CG2Real [Johnson11]

Previous Work - Realism

[Rademacher01]

Previous Work - Buildings

- **Building generation**
 - Grammar [Stiny80, Wonka03, Muller06, Schwarz15]
 - Data [Fan16]
 - Sketch [Nishida16]
 - Predefined parts [Kalogerakis12, Talton12]

Previous Work - Miscellaneous

- **Machine Learning**
 - What makes Paris look like Paris [Doersch12]
 - Architectural Style Recognition [Mathias11]
- **Image Quality & Similarity**
 - Visible Differences Predictor [Daly92]
 - Visual Equivalence and Aggregates [Ramanarayanan07,08]
 - Structural Similarity - SSIM [Wang04]

Best Dataset

Q1: CG vs Real

Q1: CG vs Real

- H_{DIFF} : participants can tell photographs and generated buildings apart.
 - Random choice = 0.5 accuracy
 - No blur, overall – $p < .001$
 - Can accept H_{DIFF}
 - Also true for each dataset

Q1: CG vs Real

- H_{DIFF} : participants can tell photographs and generated buildings apart.
 - Random choice = 0.5 accuracy
 - No blur, overall – $p < .001$
 - Can accept H_{DIFF}
 - Also true for each dataset
- Also true @ 55px

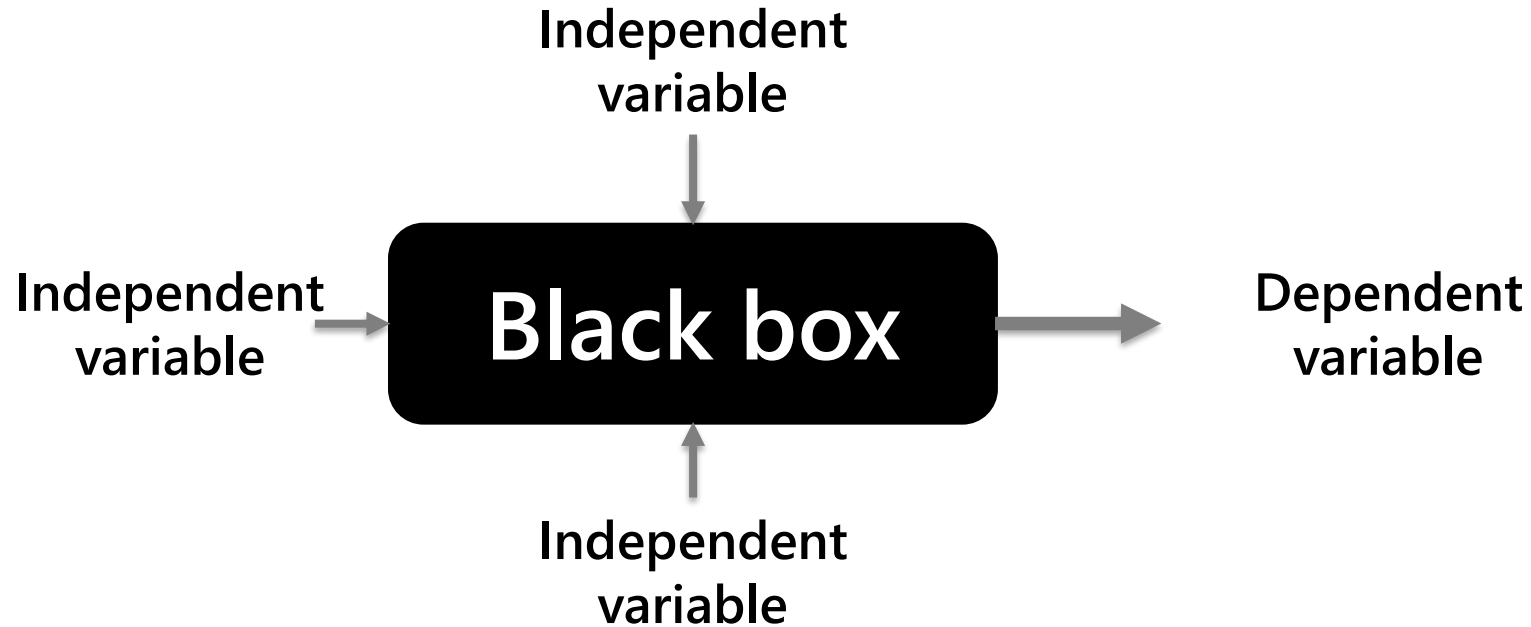

Q2: Details vs Structure

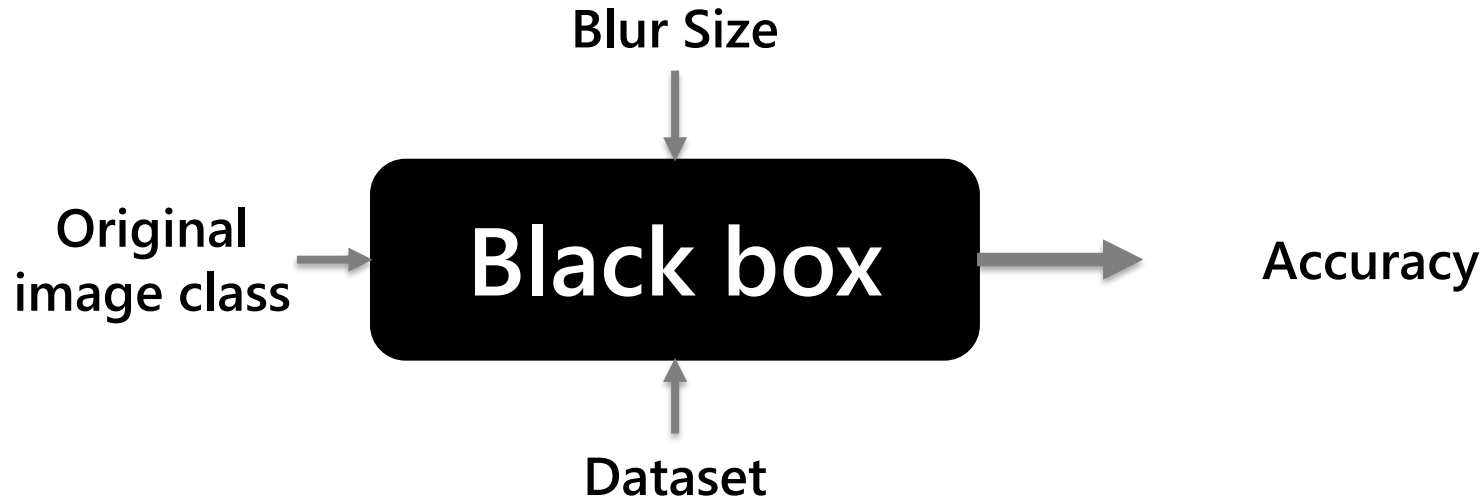

Q2: Details vs Structure

- H_{SCALE} : the detail that allows participants to tell photographs and generated images apart is present at various scales.
- ANOVA

What's ANOVA?

What's ANOVA?

What's ANOVA?

- **ANOVA**
 - Linear model
 - Effects of independent variables

Significant Effects

- Significant effects ●
 - Blur, $p < .001$
 - Dataset, $p < .001$

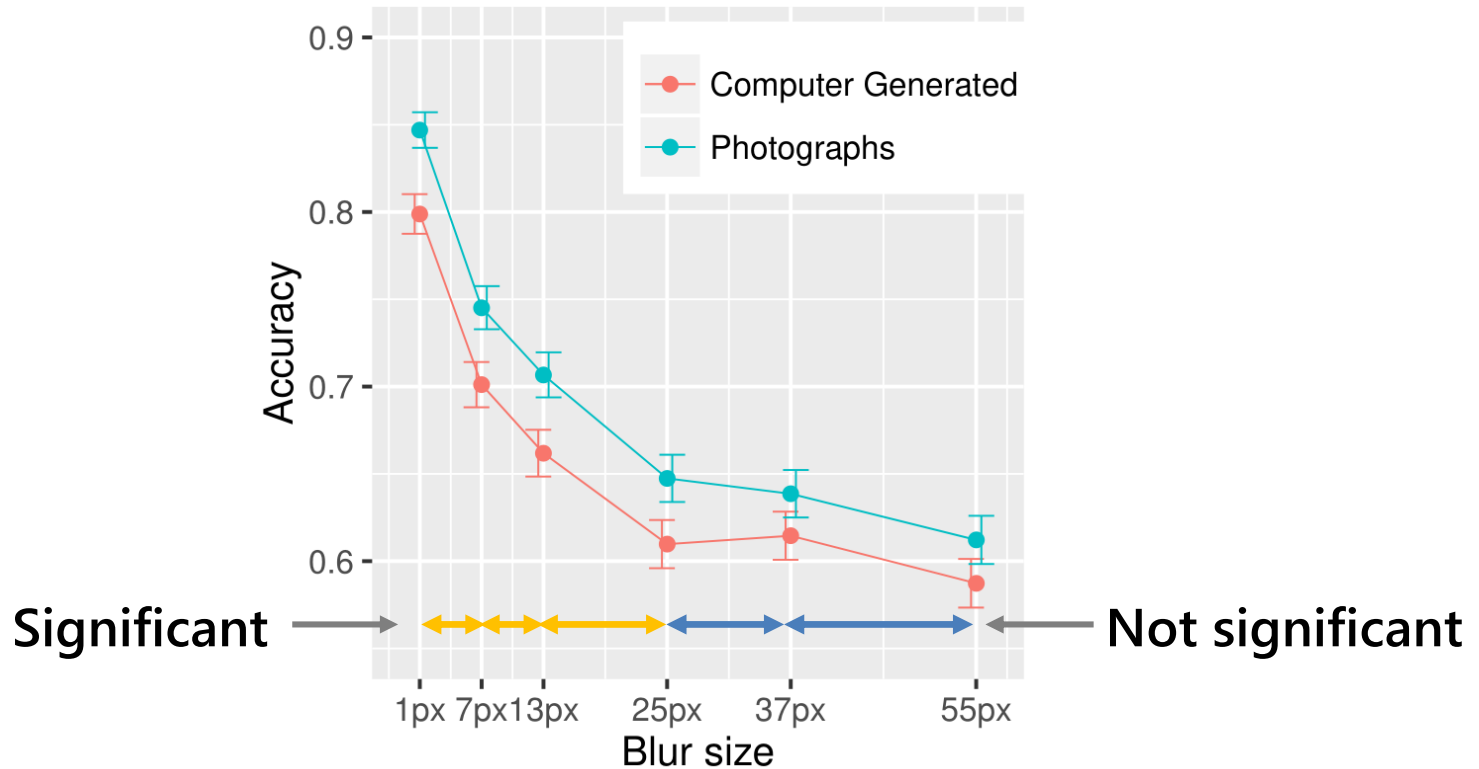

- Significant effects ●
 - Blur, $p < .001$
 - Dataset, $p < .001$
- Blur, $p < .001$
=> H_{SCALE} accepted

More on Blur

- Significant effects
 - Blur, $p < .001$
 - Dataset, $p < .001$
- Blur, $p < .001$
=> H_{SCALE} accepted

Post-Hoc - Blur

H_{SCALE} : the detail that allows participants to tell photographs and generated images apart is present at various scales.

Two- & Three-Way Interactions

- Three factors
- Interactions
- More in paper

Q2: Summary

- **Blur**

- $p < .001$, significant factor
- $\Rightarrow H_{SCALE}$ accepted
- Realism at different scales

Q3: What users thought

Participants

- **52 total**
 - 11 female
 - 24.3 years old

What users thought

- **Manually tallied debriefings**
 1. Imperfections & small detail (30/52 ~ 58%)
 2. Texture (19/52 ~ 37%)
 3. Reflections in windows (18/52 ~ 35%)
 4. "Weird" or uniform color (17/52 ~ 33%)
 5. Things in & around windows (16/52 ~ 31%)
 6. Model Structure (14/52 ~ 27%)
 7. Lighting (12/52 ~ 23%)
 8. Shadow (12/52 ~ 23%)
 9. Regularity (11/52 ~ 21%)

1. Imperfections & Small Detail (30/52 ~ 58%)

- Imperfections & small detail (30/52 ~ 58%)

Photograph

6. Model Structure

- Model Structure (14/52 ~ 27%)

Computer Generated

Computer Generated

9. Regularity

- **Regularity (11/52 ~ 21%)**

Computer Generated

Computer Generated

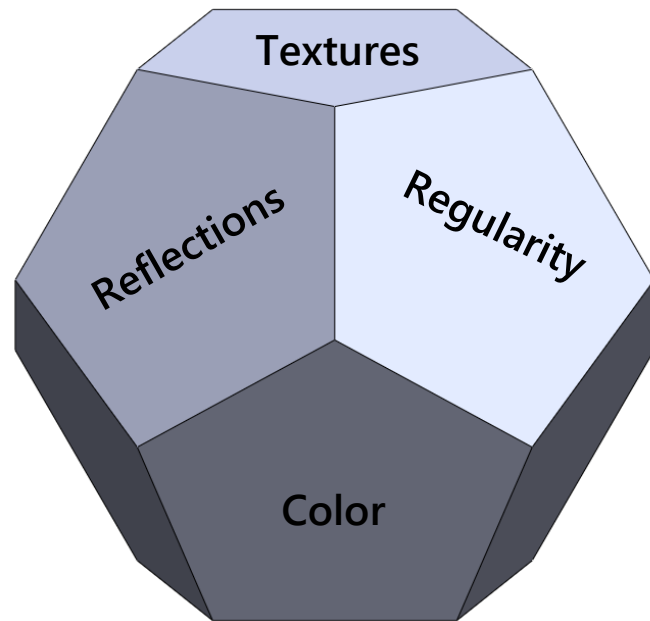

Biases

- **Cut-Out Edges**
 - 21/52 ~ 40% – “played role”
- **Camera Angles**
 - 18/52 ~ 35% – Influenced for at least one
- **Background**
 - 8/52 ~ 15% – Made me choose computer generated more often

Opinions Summary

- **Multi-faceted**
 - Guidelines, guesses
 - Not hard facts
- **Biases**

Summary and Future Work

Summary

- Realism in
 - Procedural Modelling
 - Buildings
- Methodology for experiment
 - Procedural content
- Verified
 - People can tell CG and Photos apart
 - Realism is carried at different scales
- “Soft results”
 - What people consider
 - Exploration of results

Future Work & Limitations

- **Future Work**
 - Understand asset reuse better
 - Understand importance of structure better
 - Study buildings in context
 - Neural networks to automate testing & drive rule generation
- **Limitations**
 - Design limitations & Biases
 - Generalization

Acknowledgements
